I enabled popups in the message options for disasters. This results in two popups per disaster, e.g., xyz was hit by fire PLUS city wall in xyz was destroyed by fire. For the popup I'm only interested in the 2nd message.

Two possible solutions:
(1) Join the two notifications resulting in only one message and/or popup.

(2) Create a new message option item "general disaster info" (for the less interesting "xyz hit by fire" etc.) and keep the "specific disaster info: xyz city wall destroyed" as is.
