I'm not massively surprised. Some previous thoughts in gna task #7989.

#2 - 2019-12-18 12:35 PM - Jacob Nevins
- Sprint/Milestone changed from 2.6.1 to 2.6.2

I tested with S3_0 msys2 (environment 191012, i.e., quite recent). Freeciv-mp-gtk3 installed by the installer does not work with https. However, running freeciv-mp-gtk3 from the build directory, inside full msys2 environment, does work. In this case, at least, the problem seems to be that certificates are not installed by the installer. In older environments certs can of course be also outdated.

#6 - 2019-12-27 05:57 AM - Marko Lindqvist
- File 0016-msys2-Fix-https-usage.patch added
- Status changed from New to Resolved

Attached patch for S3_0/master msys2 has two parts; install certs in installer Makefile, and take the installed certs to use by utility/ code change. Will continue with S2_6 changes, but going to push S3_0/master part in ~36h.

As this sets installer specific certs path to use in Windows builds, presumably non-installer builds break (as far as they ever worked). Still, installer is the most important use-case by far, so going forward with this and trying to address other use-cases in future tickets.

I will split msys1 changes to a new patch, so the existing msys2 patch (so far marked S3_0/master only) can go to S2_6 too.
