Sprint/Milestone:	2.6.1		
Description			
See feature #850295 for background on mnemonics in Gtk3.x.			
This patch restores mnemonics to most buttons in the Gtk3.22/4.0 clients. The majority lost their mnemonics when we stopped using deprecated GTK_STOCK items and replaced them with our own strings.			
The patch generally doesn't fill in gaps of new UI items we've added since we got the idea that mnemonics weren't a thing any more.			
This adds/modifies some strings for items whose translations we were previously getting from the Gtk project.
