Get rid of our modifications to sdl2.m4

Back in S2_6 development we modified sdl2.m4 for supporting usage of both sdl and sdl2 in the same tree. It was still needed in S3_0 as sdl-1.2 mixer is supported alternative to sdl2 mixer on that branch. Master ever uses only sdl2. It could be a good idea to get rid of our modifications, to use upstream sdl2.m4 as is, to ease maintenance.

There's an argument also against the removal of our modifications. By carrying our modifications we could be better prepared for the possible time in the future when we want to support both sdl2 and sdl3 in the same tree.
