qtg_gui_clear_theme() doesn't fallback all the way to FC_QT_DEFAULT_THEME_NAME

qtg_gui_clear_theme() should go to a theme that is guaranteed (or as close to that as possible) to exist. Currently it uses default theme name from settings, but that theme might just have been available in some user data directory in the past. Instead FC_QT_DEFAULT_THEME_NAME, that is at least known to be provided by freeciv installation, should be used.

Also qtg_gui_load_theme() assumes such a behavior from qtg_gui_clear_theme() where it tries to avoid infinite recursion by checking against FC_QT_DEFAULT_THEME_NAME, not default theme name from settings.
