Lexxe point out in Bug #864613 that Poison City is not subject to diplchance, nor is that documented. Sveinung have done the research, and points out that it's intentional behavior coming from the civ2 compatibility. There's development going to make all this ruleset configurable and autodocumented in development branch. This ticket is about improving the static documentation, especially in the existing stable branches. The behavior should be mentioned in the documentation of diplchance server setting and/or documentation of spy's actions in supplied rulesets.

Attached patch changes only diplchance documentation. Diplomat action documentation in rulesets does not mention diplchance at all, so there would have been no point in listing exceptions there. Also makes it easier to rework this again when the ruleset control over diplchance usage gets implemented.
