Estimated time: 0.00 hour

Description
Make sure that they don't prevent migrating requirements to the action enabler. (Be aware of no sub targetet vs extra sub targeted and the extra's reqs and mreqs)

See if the target kind can move to the ruleset without causing trouble for the above goal. See in the target kind makes sense.

I don't fully understand what this ticket is about, but it's one of the very few remaining d3f blockers. If it's critical for final 3.1 formats, we have to get to it now.

Anyone with any insight?

#3 - 2022-04-23 09:23 AM - Marko Lindqvist
After a cursory look I think there's no need to do any code changes for this -> not considering this an alpha3 blocker.
Keeping the ticket open for a bit longer to have a deeper look before the final, official, d3f.
